PUBLIC NOTICE

CONSUMER ALERT DURING WATER OUTAGES OR PRESSURE LOSS (POWER OUTAGE)

1. The loss of water pressure (no water) for the distribution system can jeopardize the water quality in the system. The actual water quality is unknown until the water outage is over and bacteriological samples can be taken.
2. Upon return to normal water serviced, you should flush your the hot and cold water lines until the water appears clear and the water quality returns to normal. If the water looks cloudy or dirty, you should not drink it.
3. If you are concerned about water quality or are uncertain of its safety, you may add eight drops of household bleach to one gallon of water and let it sit for 30 minutes or alternatively, if you are able, water can be boiled for one minute at a rolling boil to ensure its safety.
4. Increased bacteriological water quality monitoring of the distribution system will be conducted. Water samples may be collected in your area to confirm that the water remains safe. You will be advised if the sampling reveals a water quality problem.
5. Do not be alarmed if you experience higher than normal chlorine concentrations in your water supply since the California Department of Public Health and Sacramento County Environmental Management is advising water system to increase chlorine residuals in areas that are subject to low pressures or water outages.
6. Use of home treatment devices does not guarantee the water supply is safe after low pressure or water outages.
7. If you are experiencing water outage or low water pressure, immediately discontinue any non-essential water usage. This includes all outdoor irrigation and car washing. Minimizing usage will reduce the potential for the water system to lose pressure or completely run out of water. Please notify your water system of the outage or low pressure.
8. Your water system is committed to make certain that an adequate quantity of clean, wholesome, and potable water is delivered to you. We recommend that you discuss the information in this notice with members of your family to ensure that all family member are prepared should water outages or low water pressure occur.
